LX2060 • PERFORMANCE

The performance characteristics of the Dim to Warm LumeLEX family of products can be customized based on the optic (reflector) selected.

The behavior of the Dim to Warm modules links the color of the light to the dimmed output of the fixture just like a halogen or incandescent source. Therefore the four characteristics defining the color — the color rendering index (CRI), the correlated color temperature (CCT) range, the power that it uses (watts), and its “available lumens” – are linked to the dim setting. Note that available lumens is a theoretical value that represents the light output of the module on its own – no fixture or optic attached. Also note that the CRI of this fixture is a minimum of 92 at any dimming setting.

In the LSI part number, the LED module is specified with a letter and a number that immediately follow the product series number. For example, in the part number LX2060-D1525-92DWW2-CT1-10120B, the “D1525-92DW” represents a Dim to Warm LED module with an output of 2500 lumens, a CRI of 92, a power usage of 32 watts and a color temperature range of 3000K – 2000K that is tied to the dimming setting.

The available optics (reflectors) are characterized by size, beam angle, and in some cases the characteristics of the field angle (narrow or wide). The optic is specified by the two characters that follow the LED designation in the part number. For example, the “W2” in LX2060-D1525-92DWW2-CT1-10120B is a 70mm diameter optic that has a 20-Degree beam.

Additional parameters, such as Center Beam Candle Power (CBCP), Delivered Lumens, and Efficiency (Lumens per Watt) are all shown in a table that is organized by LED module and optic combination.

CBCP = Center Beam Candle Power				
LED Module	Optic (Reflector)			
Lumens/CRI/Wattage	W2	W3	W4	W5
2500/92/32	9280	5304	3777	2894

Delivered Lumens				
LED Module	Optic (Reflector)			
Lumens/CRI/Wattage	W2	W3	W4	W5
2500/92/32	1597	1530	1548	1648

Efficiency = Lumens Per Watt				
LED Module	Optic (Reflector)			
Lumens/CRI/Wattage	W2	W3	W4	W5
2500/92/32	50	48	48	52

Absolute range of values are +/- 10% of typical value, and are for all color temperatures

LED Module Lumens/CRI/Wattage SKU Code	2500/92/32 25-92
Nominal Fixture Power (+/- 20%), Watts	32
Maximum Inrush Current Amps	10
Minimum Power Factor	0.92

Inrush current is instantaneous current drawn by the LED only when fixture is initially powered on or instantaneously changed from full dim to full bright. For more details see Dimming Application Sheet, IS-0119.
