

LUMELX® 2030 SERIES • 120V • LED • DIM TO WARM • CONTROL

Shown with optional
Cross Baffle accessory

These LED Cylinder units offer high functionality in LSI's smallest, sleekest package.

- Designed for a Dim to Warm module up to 14 Watts
- System efficiency up to 48 lumens/watt
- 36,000 hour life to 70% lumen output, L70 at 95°F max ambient
- Halogen mimicking color from 3000K to 2000K
- Field interchangeable optics (16°, 24°, or 40°) modify the beam spread distribution
- Color Rendering Index (CRI) of 92 min. at all dimming settings
- Lumen output: 1000 Lumens
- Proprietary mixing optics for smooth even light
- Tested to LM79 and LM80 Protocols, TM-30 available
- 0-10V dimming allows for 2 zones of control on one circuit CONTROLTrack down to 10%
- Accessory holder accepts up to two size-AAA LSI filters and accessories
- Sturdy die-cast aluminum housing
- No UV or IR emissions; no mercury or lead
- Self and wrench locking stem for horizontal and vertical focusing
- On/off safety switch (on 0E track fitting)
- Finishes: LSI Black, White, and Silver
- Fixture weight: 2 lbs
- All modules are field replaceable

FIXTURE PART NUMBERS

Please review the **ORDERING INFORMATION** section on the next page as well as the **MOUNTING OPTIONS** on page 3 to create a part number for each fixture that specifies the following:

- LED Module
- LED Rating
- Color Temperature
- Optic - mm/beam spread
- Dimming
- Voltage
- Finish

PART NUMBER

Example Part Number: **LX2030-D0910-92DWP1-CT2-10120W** is a fixture with a Dim to Warm LED module, 1000 Lumen/92 CRI/14 Watt LED rating, 3000° - 2000°K Color Temperature, 50mm 16° Color Mixing Optic, CT2 CONTROL Track fitting 0-10V compatible control gear, 120V and a White finish.

LUMELX® 2030 • DIM TO WARM PERFORMANCE

The performance characteristics of the Dim to Warm LumeLEX family of products can be customized based on the optic (reflector) selected.

The behavior of the Dim to Warm modules links the color of the light to the dimmed output of the fixture just like a halogen or incandescent source. Therefore the four characteristics defining the color - the color rendering index (CRI), the correlated color temperature (CCT) range, the power that it uses (watts), and its "available lumens" are all linked to the dim setting. Note that available lumens is a theoretical value that represents the light output of the module on its own – no fixture or optic attached. Also note that the CRI of this fixture is a minimum of 92 at any dimming setting.

In the LSI part number, the LED module is specified with a letter and a number that immediately follow the product series number. For example, in the part number LX2030-D0910-92DWP1-0E-TE120B, the "D0910-92DW" represents a Dim to Warm LED module with an output of 1000 lumens, a CRI of 92, a power usage of 14 watts and a color temperature range of 3000K – 2000K that is tied to the dimming setting.

The available optics (reflectors) are characterized by size, beam angle, and in some cases the characteristics of the field angle (narrow or wide). The optic is specified by the two characters that follow the LED designation in the part number. For example, the "P1" in LX2030-D0910-92DWP1-0E-TE120B is a 50mm diameter optic that has a 16-Degree beam.

Additional parameters, such as Center Beam Candle Power (CBCP), Delivered Lumens, and Efficiency (Lumens per Watt) are all shown in a table that is organized by LED module and optic combination

CBCP = Center Beam Candle Power			
LED Rating	Optic (Reflector)		
Lumens/CRI/Wattage	P1	P2	P4
1000/92/14	6210	3070	1530

Delivered Lumens			
LED Rating	Optic (Reflector)		
Lumens/CRI/Wattage	P1	P2	P4
1000/92/14	560	580	570

Efficiency = Lumens Per Watt			
LED Rating	Optic (Reflector)		
Lumens/CRI/Wattage	P1	P2	P4
1000/92/14	47	48	47

Absolute range of values are +/- 10% of typical value, and are for all color temperatures

LED Rating Lumens/CRI/Wattage SKU Code	1000/92/14 10-92
Nominal Fixture Power (+/- 20%), Watts	14
Maximum Inrush Current Amps	10
Minimum Power Factor	0.92

Inrush current is instantaneous current drawn by the LED only when fixture is initially powered on or instantaneously changed from full dim to full bright. For more details see Dimming Application Sheet, IS-0119.
