LX2048 • PERFORMANCE

The performance characteristics of the LumeLEX family of products can be customized based on the LED module and the optic selected.

Each available LED module is defined by five characteristics – the color rendering index (CRI), the correlated color temperature (CCT), the power that it uses (watts), its “available lumens,” and beam spread. Note that available lumens is a theoretical value that represents the light output of the module on its own – no fixture or optic attached.

In the LSI part number, the LED module is specified with a letter and a number that immediately follow the product series number. For example, in the part number LX2048-ZE308-903004-CT3-DX120W, the “ZE308-903004” represents an LED module with an output of 810 lumens, a CRI of 90, a power usage of 15 watts, a color temperature of 3000K, and a 4-degree beam.

Additional parameters, such as Center Beam Candle Power (CBCP), Delivered Lumens, and Efficiency (Lumens per Watt) are all shown in a table that is organized by LED module and optic combination.

CBCP = Center Beam Candle Power			
LED Module		Optic (Reflector)	
Lumens/CRI/Wattage	04	12	25
810/90/15	70,000	10,731	2,850

Delivered Lumens			
LED Module		Optic (Reflector)	
Lumens/CRI/Wattage	04	12	25
810/90/15	370	513	465

Efficiency = Lumens Per Watt			
LED Module		Optic (Reflector)	
Lumens/CRI/Wattage	04	12	25
810/90/15	25	24	31

Absolute range of values are +/- 10% of typical value, and are for all color temperatures

LED Module Lumens/CRI/Wattage Letter Code	810/90/15 08-90
Nominal Fixture Power (+/- 20%), Watts	15
Maximum Inrush Current, Amps	10
Minimum Power Factor	0.92

Inrush current is instantaneous current drawn by the LED only when fixture is initially powered on or instantaneously changed from full dim to full bright. For more details see Dimming Application Sheet, IS-0119.
